

Electrified Cylindrical and Mortise Locks by Sargent, Yale and Corbin Russwin

The logo for Access Hardware Supply (AHS) features the letters 'AHS' in a bold, red, sans-serif font. The letters are set against a white rectangular background with a thin grey border. This logo is positioned on a vertical blue bar that is part of a larger decorative graphic on the left side of the page, which includes various colored rectangular blocks in shades of blue, green, and red.

When it comes to strength and durability, Sargent, Yale and Corbin Russwin continue to set new standards with their lines of electrified mortise locks for high security and fire safety applications. All are designed and constructed with high-quality components to provide maximum security, and can accommodate virtually any wood or hollow metal door application. They are ideal for the most demanding applications, including hospitals, schools / universities, office buildings, government facilities and apartment buildings.

Like the electrified mortise locks, electrified cylindrical locks are drop-in replacements for their mechanical counterparts, and eliminate the need for exposed and vulnerable locking devices, such as electric strikes, magnetic locks and remote request-to-exit devices. They provide remote locking and unlocking, and are perfect for door control where increased security is necessary at all times, while meeting life safety codes. Common applications include stairwells, pharmacies, computer rooms, museums and other high-security areas.
