

Schlage AD-Series Electronic Locks

AHS

AD-Series electronic locks from Schlage are designed to provide more options, more functionality in the lock and more compatibility with existing systems. Its patent-pending modular design allows the lock to be customized to fit the needs of an application now, and can change to meet future needs without removing it from the door. Factory options include choices of credential readers, chassis type, network configurations, locking functions, power options, lever styles and finishes. It also offers a wide selection of features that can be configured in the field to customize your openings.

Features:

- More intelligent and convenient security than traditional mechanical locking devices
- Audit trail reports that allow tracking usage and events
- Update users and access rights at the lock using the keypad or handheld device
- Upgrade to a networked solution without removing the lock from the door
- Available in cylindrical, mortise, mortise with deadbolt and exit trim
- Compatible with major brands of master key systems and exit devices

All AD-Series offline locks have built-in incremental features needed for a networked system such as request-to-exit and -enter sensors, interior cover tamper guard, as well as a door position switch. If a user chooses to network an opening in the future, all the components will already be in place.

Access Hardware Supply is one of only two master distributors for the AD-Series in the United States. Call us to order Schlage AD-Series Electronic Locks. We're your best source.
