

Travel at Your Own Speed with Norton 7100SZ SafeZone® Closers

At last, a revolutionary product that creates a “zone of safety” in the door openings at your facility! Norton’s SafeZone is a closer/holder that senses any movement in the door opening and stops the door from closing – instantly.

A physically disabled person in a wheelchair; an elderly person moving slowly; a child who stops to pick up a toy, all are safe to move through the door opening at their own pace. The SafeZone sensor detects movement in both directions, and is excellent for use in healthcare facilities, assisted living homes and schools.

Naturally, 7100SZ SafeZone closers have the quality and all the features you’ve come to expect from Norton.

For more information, visit www.accesshardware.com or call 800.348.2263 to speak with an Access Hardware Supply professional. They have the knowledge and advice you need for any access control project, and the inventory to make it happen.
