NEW Spring Force Indicator for 7500 Series Door Closers

Note: This notice is being sent to all ASSA ABLOY Door Security Solutions Sales Representatives.

September 27, 2010

Effective November 1, 2010, Norton will introduce a **spring force indicator** on all 7500 Series door closers. This visual indicator enables the installer to quickly set and verify the spring size on the closer, eliminating the guesswork of setting the spring force. Previously, the installer had to count the number of turns on the spring-adjust screw.

The spring indicator will be **standard** on all 7500 Series door closers therefore special nomenclature is not required. Pricing is not affected by this addition.

If you are aware of any distributor who will be placing a stocking order between now and November 1st, we encourage you to make them aware of this new feature. **The spring force indicator cannot be added to units in the field.** Norton will not replace existing stock with closers that have the spring indicator. "Closer Equipped with Spring Force Indicator" will be noted on the individual and master carton labels so distributors who currently stock the 7500 door closers can keep their inventory separate.

The official announcement will be sent to ASSA ABLOY Door Security Solutions sales representatives and Norton distributors in October.
