

Power Transfers from Access Hardware Supply

Access Hardware Supply offers a complete range of power transfer options from leading manufacturers such as ADAMS RITE, MCKINNEY, RIXSON, and SECURITRON.

Installed in door and frame edges, power transfers with flexible steel conduit provide a secure and unobtrusive means of channeling electrical wiring from the door frame into the door itself to power electric strikes, locks, exit bars or other electrical options. Electric hinges also pass a constant flow of current between the power source and any actuated devices on doors, and are available in numerous styles, colors and duty ratings. All power transfers are easy to specify and install, and are ideal for new or retrofit applications.

Please feel free to call an Access Hardware Supply expert for more information on power transfers or any other access control accessories, or visit www.accesshardware.com.
