

Trine Axion Premium Electric Strikes: Adjustable, Selectable and Easily Installable

AHS

Axion Electric Strikes are truly a triple threat, since they are size adjustable, voltage selectable and require up to 80% less cutting than standard strikes. Trine has also done away with “the ugly black ramp” that we all have come to expect on electric strikes. Instead, the Trine Axion looks like a traditional strike plate – one piece of stainless steel, all one color – the way it should look.

Key features include:

- Grade 1 strike and faceplates
- Ships with two faceplates
- Over 500,000 life cycles
- Over 1500 lbs. holding force
- Solid stainless steel latch
- Accepts latch with up to 5/8" throw

All strikes are also non-handed and fail secure standard action (unlocks with power). The short version: stocking Trine Axion Electric Strikes means always being prepared for any job or application.
