

## Choose the Strong Silent Type

**With the QEL Exit Device, you won't be the center of attention every time you step out of the room.**

Most standard exit devices on the market are so noisy during regular operation they might as well have an alarm on them. This is not the case with the QEL Exit Device from Von Duprin. It is whisper-quiet both electrically and mechanically, and it features all the durability, reliability and high-performance that have made Von Duprin world famous.

The QEL Exit Device is the silent solution for environments where the slightest noise makes a big difference, such as hospitals, nurseries, libraries, conference rooms, museums and theaters. A wide range of finish and trim options also allow the QEL to easily blend in with existing architecture.

Designed with advanced sensing electronics, The QEL features automatic calibration that adjusts to installation variations, and on-board troubleshooting diagnostics built right into the power supply and device.

**So remember . . . you don't have to go out with a bang . . .**
